[in](#) LinkedIn [G](#)itHub [</>](#) Portfolio

Profile

Applied AI Developer and Computer Science & Business Systems graduate with hands-on experience building end-to-end AI applications using Python, Machine Learning, Computer Vision, NLP, LLMs, and Retrieval-Augmented Generation. Experienced in developing privacy-first AI systems, local LLM applications, and intelligent screening systems using Streamlit, Flask, APIs, and vector search.

Education

- **B.Tech – Computer Science & Business Systems** 2022 – 2026
Asansol Engineering College **CGPA: 7.69**
- **Higher Secondary (12th)** 2021
Purba Barasat Adarsha Vidyapeeth **85%**
- **Matriculation (10th)** 2019
Ramakrishna Vivekananda Mission Vidyabhawan **87.71%**

Technical Skills

- **Languages:** Python, SQL, JavaScript
- **AI / ML:** Machine Learning, Scikit-learn, NLP, Computer Vision, Feature Engineering, Model Evaluation
- **LLM / Generative AI:** LLMs, Ollama, LangChain, Prompt Engineering, RAG, Embeddings, Semantics
- **AI Infrastructure:** FAISS, Vector Search, GitHub API, REST APIs
- **Development:** Streamlit, Flask, React, Git, GitHub
- **Data:** Pandas, NumPy, Matplotlib, SQL, Data Analysis

Projects

- **Early Behavioral Screening Assistant** — Python, OpenCV, LLMs, Streamlit [Source](#)
Built a privacy-first AI system that analyzes short videos using computer vision to extract behavioral signals. Integrated LLM-based reasoning to generate explainable, non-diagnostic screening insights and automated PDF reports.
- **AI-Based Candidate Screening System** — Python, Streamlit, Ollama, GitHub API [Source](#)
Developed an end-to-end AI recruitment screening platform that evaluates candidates using resume information, GitHub activity, academic performance, and project experience. Integrated local LLM reasoning with a custom scoring engine to generate explainable candidate evaluations.
- **AI-Based Web Scraper & Q&A Bot** — Python, Streamlit, FAISS, LangChain [Source](#)
Developed an AI-powered web intelligence system that extracts multi-page website content, converts information into vector embeddings, and enables semantic question answering using a local LLM.
- **Smart Travel Planner** — Python, LLMs, FAISS, Flask [Source](#)
Built an AI travel planning system that generates personalized itineraries using destination information, user preferences, and budget considerations. Integrated FAISS-based vector search with an AI reasoning workflow.

Experience

- **Data Mining Analyst (Intern)** – CK & Sons Textiles Aug 2024 – Oct 2024
Analyzed production and sales data to identify demand and inventory trends. Automated reporting workflows using Python, SQL, and Excel, developing practical experience in data preprocessing and converting raw business data into insights.

Certifications & Achievements

- IBM Generative AI Certification [Certificate](#)
- Smart India Hackathon 2024 – College-Level Selection [Certificate](#)
